Best Practices: Minimizing Wall Buckling & Column Flex

If roof span is >32’ 2” x 6” exterior studs should be used

>12’ between exterior wall and nearest interior wall

Interi or walls

If distance between exterior load bearing wall is >12’, 2” x 6” studs should be used for exterior walls or design walls

Maximum wall height 10’

If roof span is <32’ and distance between load-bearing exterior wall and nearest interior wall is <12’, 2” x 4” studs may be used for both exterior and interior walls

6d fasteners [2” length] [.113” diameter] staples not recommended
