Subject: Low Emitting Material – Composite Wood

Dear Mr. Bobby Byrd,

This letter is in reference to Hexion adhesive resins and their classification as a Low Emitting Material – Composite Wood.

Hexion's adhesive resins supplied to Martco, LLC, plywood plant at Chopin, LA, and the Martco, LLC, oriented strand board plant at Oakdale, LA, do not contain urea-formaldehyde resin. Resins supplied to those locations are exterior grade phenol-formaldehyde resins.

These adhesive resins when cured in the products produced at these locations will not emit formaldehyde into the environment thus being classified as a Low-Emitting Material – Composite Wood by standards such as LEED, a green building standard.

Sincerely,

Chris Wren
NA OSB R&D Leader
