RoyOMartin®

PLANTER MIX

Screened for grain size to ensure consistency

Stable growth host for typical eco plant life

Permeability rating greater than Class III for consistent draining

Sustainably sourced, with no chemical additives

ABOUT

RoyOMartin's Planter Mix is a mixture of dark rich organic compounds that vigorously support plant growth. With a mix of stable organic compounds that are produced mechanically with no chemical additives, RoyOMartin's Planter Mix is screened for grain size that effectively makes this planter mix consistent in its specific gravity. RoyOMartin's Planter Mix is a stable growth host for typical eco plant life and has a greater than class III permeability rating for consistent drainage. It originates from a stable, long-term sustainable source within RoyOMartin's land base and is not disrupted by seasons.

Grain Size: Not greater than 3"

Dry Density: 14.7

Moisture Content: Ambient no greater than 60%

PH: 5.5 +/- 0.3

Perm rating: Greater than Class III

Compounds: Inert organic, low in nitrogen, simple oxides

Verification: Forest Stewardship Council® (FSC®)

Units: Cubic Yards

Weight: 600 pounds per unit (+ or -10%)

Color: Dark Brown
